TOOLS NEEDED : Phillips head screwdriver • For best results, follow Assembly Steps in order presented.

### KEY:

- B = Back panel
- F = Front panel
- LS = Left side panel
- RS = Right side panel
- R = Roof grille
- C = Casters
- CC = Cage Components
- PC = Playtop Components

\* In most cases, we recommend two people assemble this cage. 

\* Screws are installed in place. When attaching panels or components, back the screw out, match up the components, and reinsert to attach.

## 1 PIECES

Back the Phillips-head screws out, align the side panel with the front panel, and re-tighten the screws to attach.

*Note: Small loop on the back panel should face the interior. This loop helps hold the bottom grille in place.*

Repeat this method for all panels to assemble the cage body.

Set the cage roof grille in place and attach with the Phillips-head screws.

## 2 PIECES

While the lockable rolling casters can be added at any point in the assembly, we recommend installing them at this time.

Screw the threaded caster post into the frame leg at each corner. If preferred, tighten each caster with a slim wrench.

# 3 PIECES

**Perch:**  
Hold the perch in place in the cage interior. Install a Phillips-head screw through the bracket, through the cage wire, into the perch bracket and tighten with a Phillips screwdriver for all four screws.

**Cups/cup holders:**  
Open the cup door. Insert the screw posts on the cup holder through the door mesh, add the bracket on the outside, and tighten to the doors with the wing nuts. Place the deep cups into the holders.

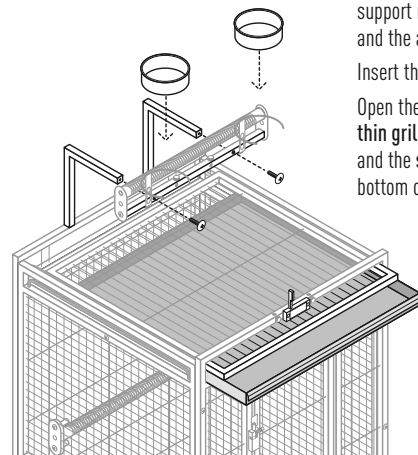

**Grille and tray:**  
Open the grille lock. Slide the grille (with handle) into the top channel and the deep tray into the bottom channel.

# 4 PIECES

Remove the hex screws from the ends of the perch bar supports. Install the perch bar supports on the back panel of the cage.

Back the Phillips-head screws out on the underside of the perch bar and attach the cup holders.

Attach the perch bar to the support rails using the hex screws and the allen wrench. Insert the shallow cups. Open the grille lock. Slide the thin grille into the top channel and the shallow tray into the bottom channel.

Loosen the knob screws on the perch bar rail and along the cage front. Insert the ladder and re-tighten the knob screws.

**\*** When fully assembled, check and tighten ALL screws and wing nuts over the entire cage to ensure a safe and stable home.

Assembly completed. ■
