

1

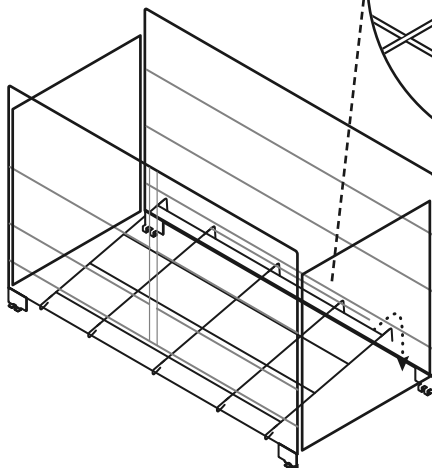

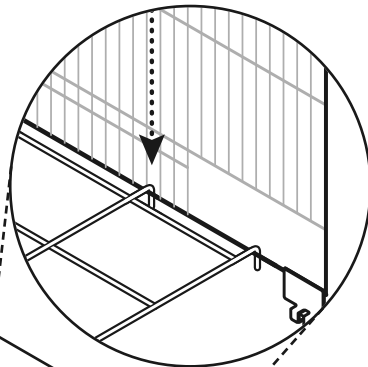

PIECES

Unfold the cage body
to create a box shape.

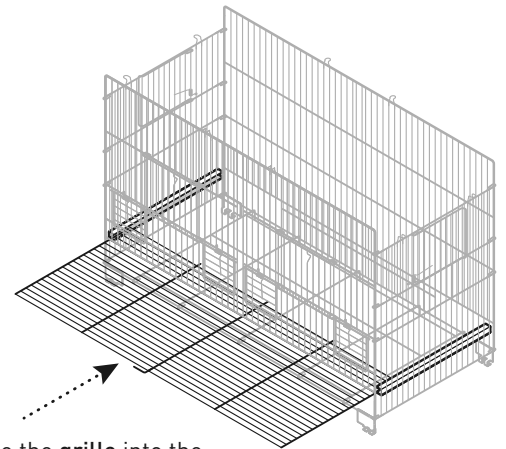

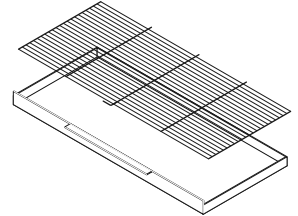

Rotate the base grid
around to the cage
underside and catch
the hooks over the
bottom horizontal wire.

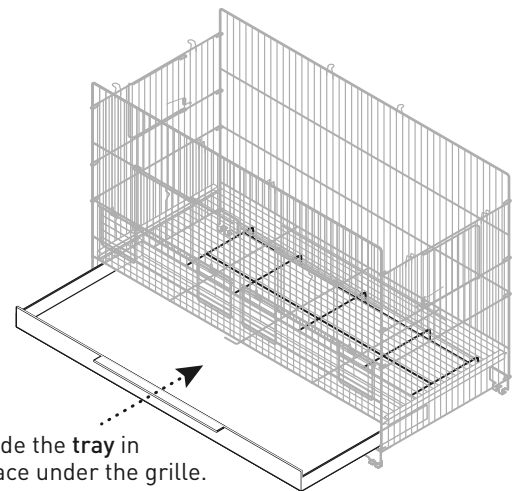

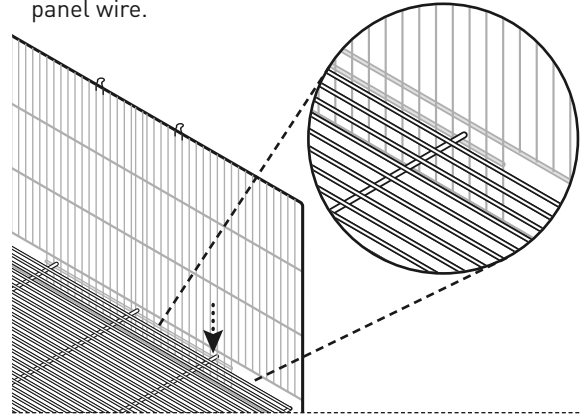

2

PIECES

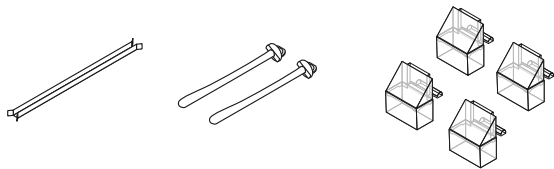

Slide the grille into the
tracks, resting the extended
wires on the lower back
panel wire.

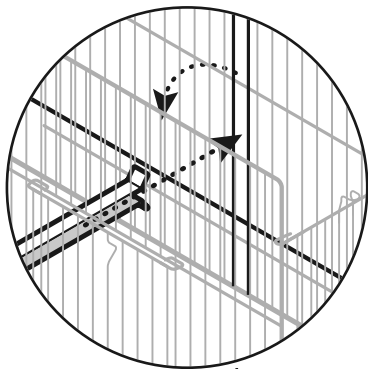

Slide the tray in
place under the grille.

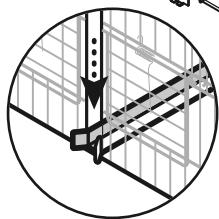

3 PIECES

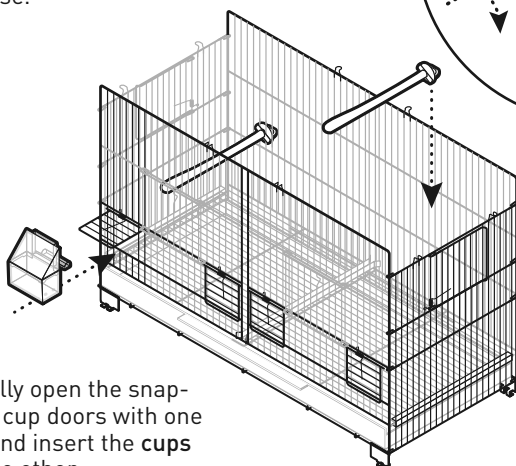

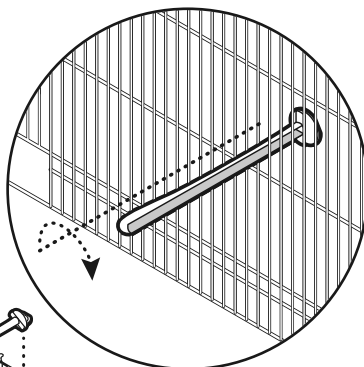

Insert the **channel** for the divider panel sideways through the gap, and then rotate the piece 90°.

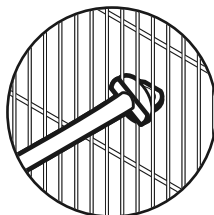

Rest the **divider channel** down onto the horizontal wire in front and back.

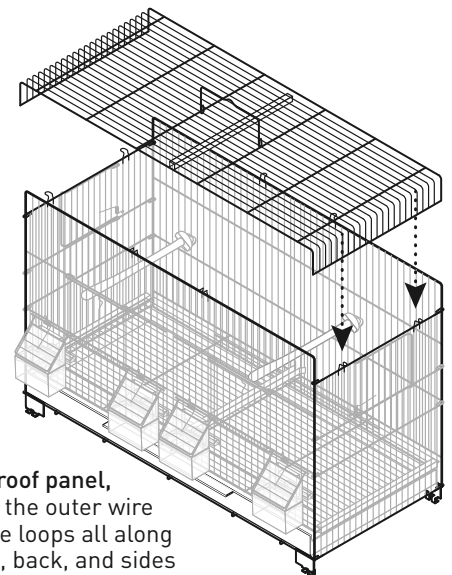

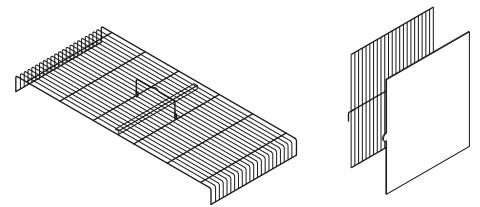

Starting from the cage exterior, insert the **perches** sideways and then rotate 90°, trapping the cage wire between the perch bracket and base.

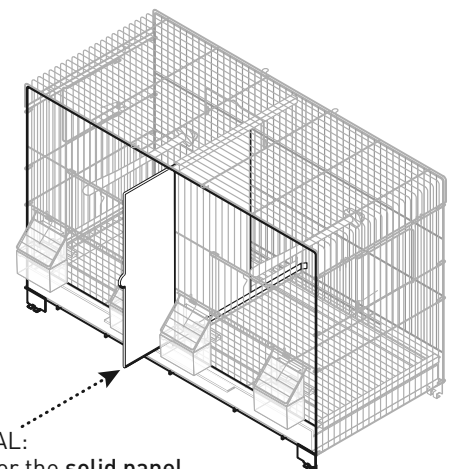

Carefully open the snap-spring cup doors with one hand and insert the **cups** with the other.

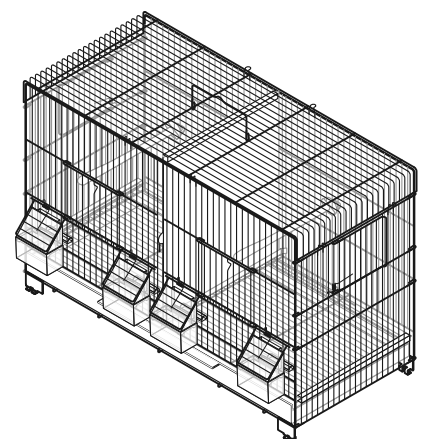

4 PIECES

Add the **roof panel**, catching the outer wire under the loops all along the front, back, and sides of the cage body.

OPTIONAL:
Add either the **solid panel divider**, or the **mesh divider**, or leave the divider out for a more interior space.

Assembly completed. ■
